Blog: Building a Web Interface to a centralized view of Application Logs with LogWatch

March 2024 (Great Neck, NY)

Managing and analyzing log data proved inefficient due to the sheer volume and dispersion of log files across various services and applications. Locating specific entries often necessitated time-consuming manual searches through individual log files.

LogWatch

March 2024 (Great Neck, NY)

LogWatch monitors application log files to provide real time detection of errors and raise alerts to facilitate quick resolution

LogWatch is a Guardian program that watches log files for new entries and examines the content for a configured error pattern. When an anomaly is detected, LogWatch raises alert to notify team members via email, text, VHS or file records.

uLinga For Kafka. A Different Approach

January 2024 (Great Neck, NY)

uLinga for Kafka allows your NonStop applications and data sources to be completely integrated with Kafka. uLinga takes a unique approach to Kafka integration: it runs as a natively compiled Guardian process pair, and supports the Kafka communications protocols directly over TCP/IP.
