NonStop Operation Intelligence– Using TOP

Updated: Jan 24, 2021

Do you remember how you did that two years ago?

I am sure that you can think of cases when you had a hard time remembering the syntax of how to perform certain NonStop operations because you rarely do them.

For example:

- How to set up a New Spooler
- How to configure a new EMS Collector
- How to add a new Netbatch Job, etc.

It doesn't matter how much experience you have on NonStop, the reality is that if you don't use it, you lose it. You may even get desperate enough to resort to looking it up in the NonStop manuals, which sometimes could be challenging.

TOP makes it easy

If you use our TOP GUI tool, you can get these done in a breeze.

To create a New Spooler, just click on the Spooler component and select New Spooler Config Wizard, which guides you through a step-by-step creation of a new Spooler.

Similarly, use TOP and right click on the EMS icon to create a New Collector. You will get a step-by-step screen to guide you through the process.

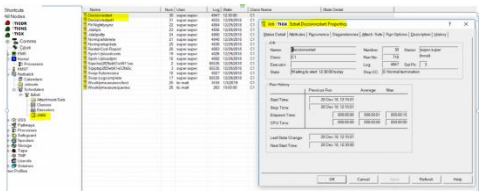
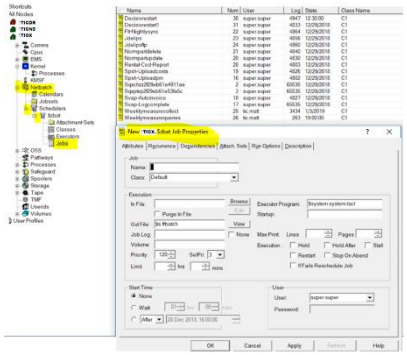
Managing Netbatch jobs is just as easy with TOP. You can list all the details about the jobs by clicking on JOBS, and right clicking shows the properties of an individual Netbatch job, like this one.



And if you want to add a new one, just right click and select “Submit New Job” and you will be prompted through the process.



In summary, TOP helps everyone, NonStop novices and experts alike, to perform operations easily via a Graphical User Interface (GUI). Even if it involves an operation that you rarely perform, the dialog boxes and point-and-click interfaces helps you get it done easily.

Are you still not using GUI?

TOP is a powerful GUI operation tool for NonStop. It has been proven that GUI is more productive than a command line interface for many reasons. Yet, I am sure that some NonStop folks may insist that it is “easier” to use TACL to perform the same functions. I submit that is a matter of habit or preference, not because it is easier. For example, are you using the COMMAND PROMPT interface to do work on your desktop computer? I suspect not. Most of us, if not all, rely on the Windows Explorer and all its GUI components every day to do productive work on our desktop computers. With TOP, you can now achieve the same level of productivity performing NonStop operations.

Contact us to learn more about how TOP can help your novice and experienced NonStop team be more productive with systems operations.

Phil Ly is the president and founder of TIC Software, a New York-based company specializing in software and services that integrate NonStop with the latest technologies, including Web Services, .NET and Java. Prior to founding TIC in 1983, Phil worked for Tandem Computer in technical support and software development.

comForte to offer a suite of innovative security, modernization, and connectivity solutions for NonStop systems users. comForte develops, markets, and supports proven and innovative modernization, middleware, connectivity, and security solutions for users of HP NonStop systems.
